

Ex.no:6	DATA VISUALIZATION USING POWER BI (KAGGLE V2 – MEDICAL APPOINTMENTS)

Aim:

To clean, preprocess, and transform the raw medical appointments dataset, load the clean data model into Power BI, and build an interactive visual dashboard to analyze booking trends, cancellation patterns, guest demographics, and pricing metrics.

Algorithm:

1. **Import Dataset:** Load [KaggleV2-May-2016.csv](#) into Power BI using **Get Data** → **Text/CSV**.
2. **Clean Data:** Open **Power Query Editor**, rename the required columns, check missing values, and set appropriate data types.
3. **Load Data:** Click **Close & Apply** to load the cleaned dataset into Power BI.
4. **Create DAX Measures:** Create **Total Missed** and **No Show Rate** measures to calculate missed appointments and their percentage.
5. **Create Visualizations:** Build a **Donut Chart, Card, Treemap, Clustered Column Charts, and Stacked Bar Chart** using appointment, gender, SMS, health-condition, and no-show fields.
6. **Format Dashboard:** Add suitable titles, labels, percentage formats, and consistent colors to the visuals.
7. **Analyze Results:** Analyze appointment attendance, no-show patterns, SMS impact, gender distribution, and health-condition factors.

Output:

Count of AppointmentDay
by Gender and No_show

Result:
